Coverage

- Introduction
- Literature Review
- Research Data Repositories (RDR)
- Objectives of the Study
- Methods
- Pillars of RDM interoperability in India
- RDM Stakeholders in India
- RDRs in India
- Workflow of RDRs System in India
- Discussion
- Conclusion
- Reference

Introduction

Over 50+ research data repositories in India

Allows easy access & sharing

Enhances visibility of research data

Data management of an individual researcher/ institute

Value for reuse

Avoid duplication of research work

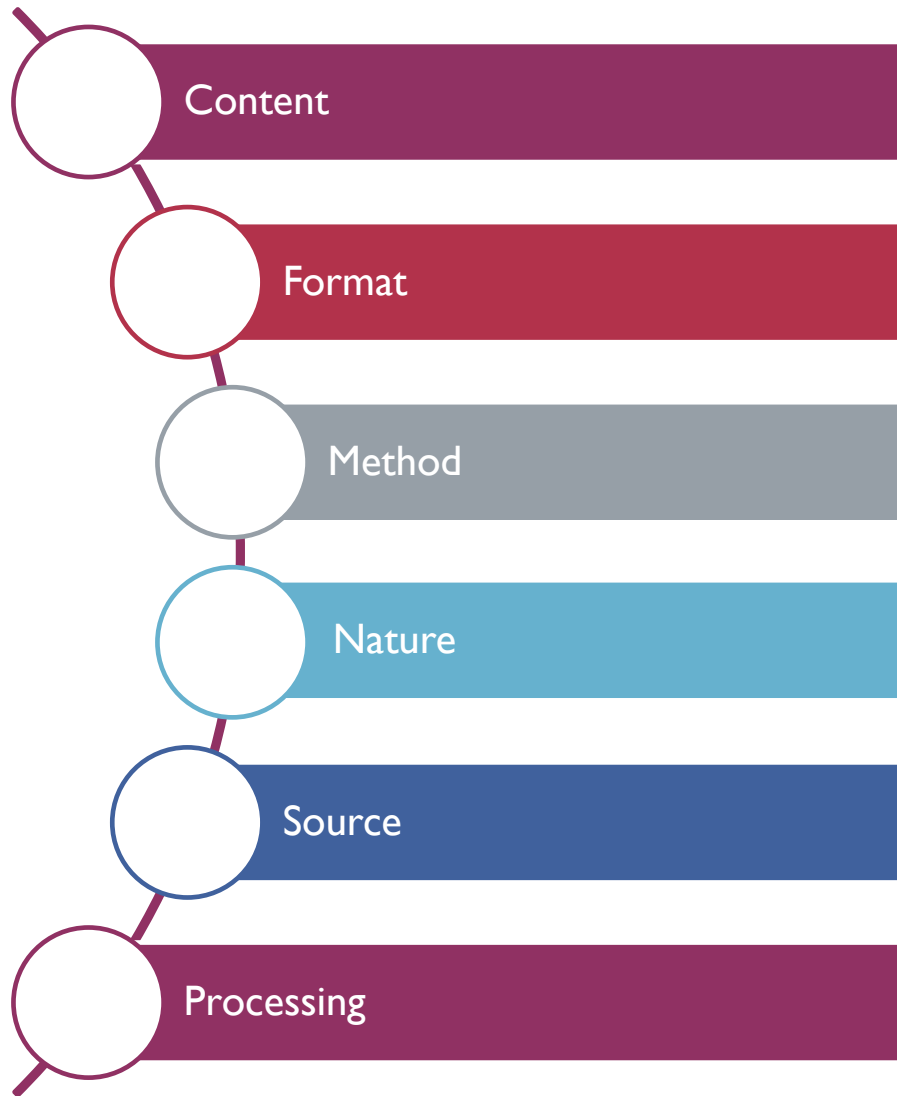

Funding agencies mandatory requirement

Research Data Repositories (RDR)

- Platform for academic researchers to deposit, share, and access the research support data generated throughout the research lifecycle.
- It is collection of digital objects that are stored, managed, curated research data
- Ensuring the accessibility, preservation, and long-term availability of future access
- Linking between data and publications
- Full-filling regulatory requirements of the scholarly publishers and funding organization
- It can be divided into
 - *Institutional,*
 - *National,*
 - *International,*
 - *Disciplinary/multidisciplinary, and*
 - *Project-specific repositories*

What are Research Data?

Research Data Repositories

REGISTRY OF RESEARCH DATA REPOSITORIES

FAIRsharing.org
standards, databases, policies

Open Science Framework

A scholarly commons to connect the entire research cycle

IEEE DataPort™

Research Data Repositories (RDR) in India

- Over 50 Indian RDRs are listed in re3data.org
- Major subjects cover: *life science, medicine, science, technology, agriculture, humanities, and social sciences*
- ESSO-INCOIS, Hyderabad <https://incois.gov.in/>
- ICRISAT Dataverse Network <https://dataverse.icrisat.org/>
- ICSSR Data Service (INFLIBNET) <http://www.icssrdataservice.in/>
- Krishi (Knowledge-based Resource Information Systems Hub for Innovations in Agriculture) <https://krishi.icar.gov.in/>
- ESSO- Indian National Centre for Ocean Information Services <https://incois.gov.in/portal/index.jsp>
- Indian Space Science Data Center (ISSDC) <https://www.issdc.gov.in/>
- Kodaikanal Solar Observatory (KSO) <https://www.iiap.res.in/?q=kodai.htm>
- World Data Centre for Geomagnetism <http://www.wdciig.res.in/>
- Indian Biological Data Centre (IBDC) <https://ibdc.rcb.res.in/>

Objective of the study

The objective of the study is to develop an interoperable RDR system in India. The focused objectives are as follows:

- To identify the significant stakeholders of RDR in India
- To identify the pillars and role of these stakeholders in the development of interoperable RDR systems in India.
- To propose a workflow and process of RDR systems in India.

Methodology

Systematic Literature Review (SLR)

- Case studies
- Working papers
- Research reports
- Data management guides
- Similar conceptual frameworks were studied
- National research data services of UK, Australia, Europe, Canada, Netherlands, Germany etc.

Findings I: National Level Research Data Services (Major)

UK Data Service

Research Data Management - Science Europe

Canadian Research Data Centre Network

National Research Data Infrastructure Germany

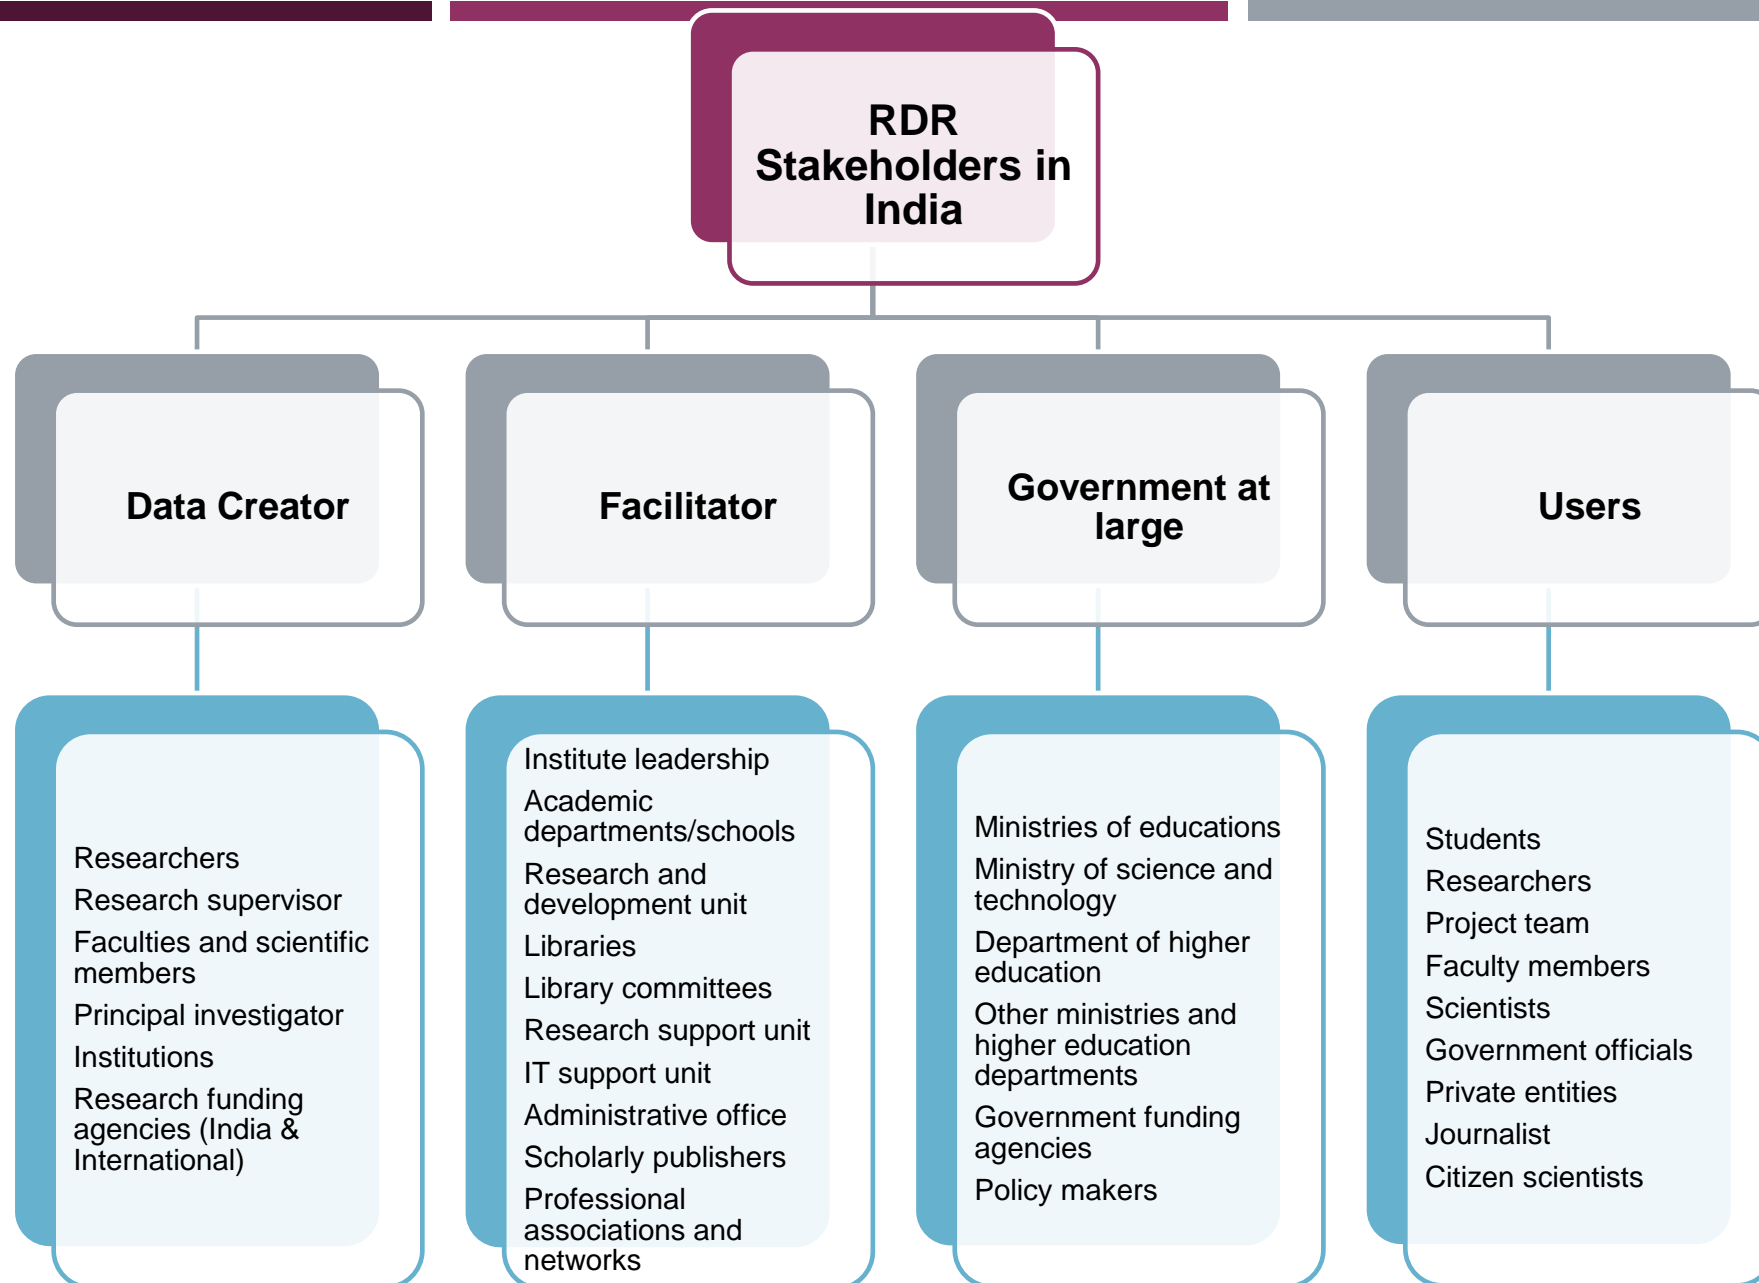

Research Data Australia

Landelijk Coördinatiepunt Research Data Management (LCRDM) - Netherlands etc.

Findings 2: RDR stakeholders in India...

- The development of RDR is a collaborative effort, and it requires the involvement of all support units to establish the RDM practices at the institute level to the national level.
- The major stakeholders of RDR involved:-
 - Who created the research data?
 - Who helps to create research data?
 - Who facilitates the management of research data?
 - Who uses the research data?

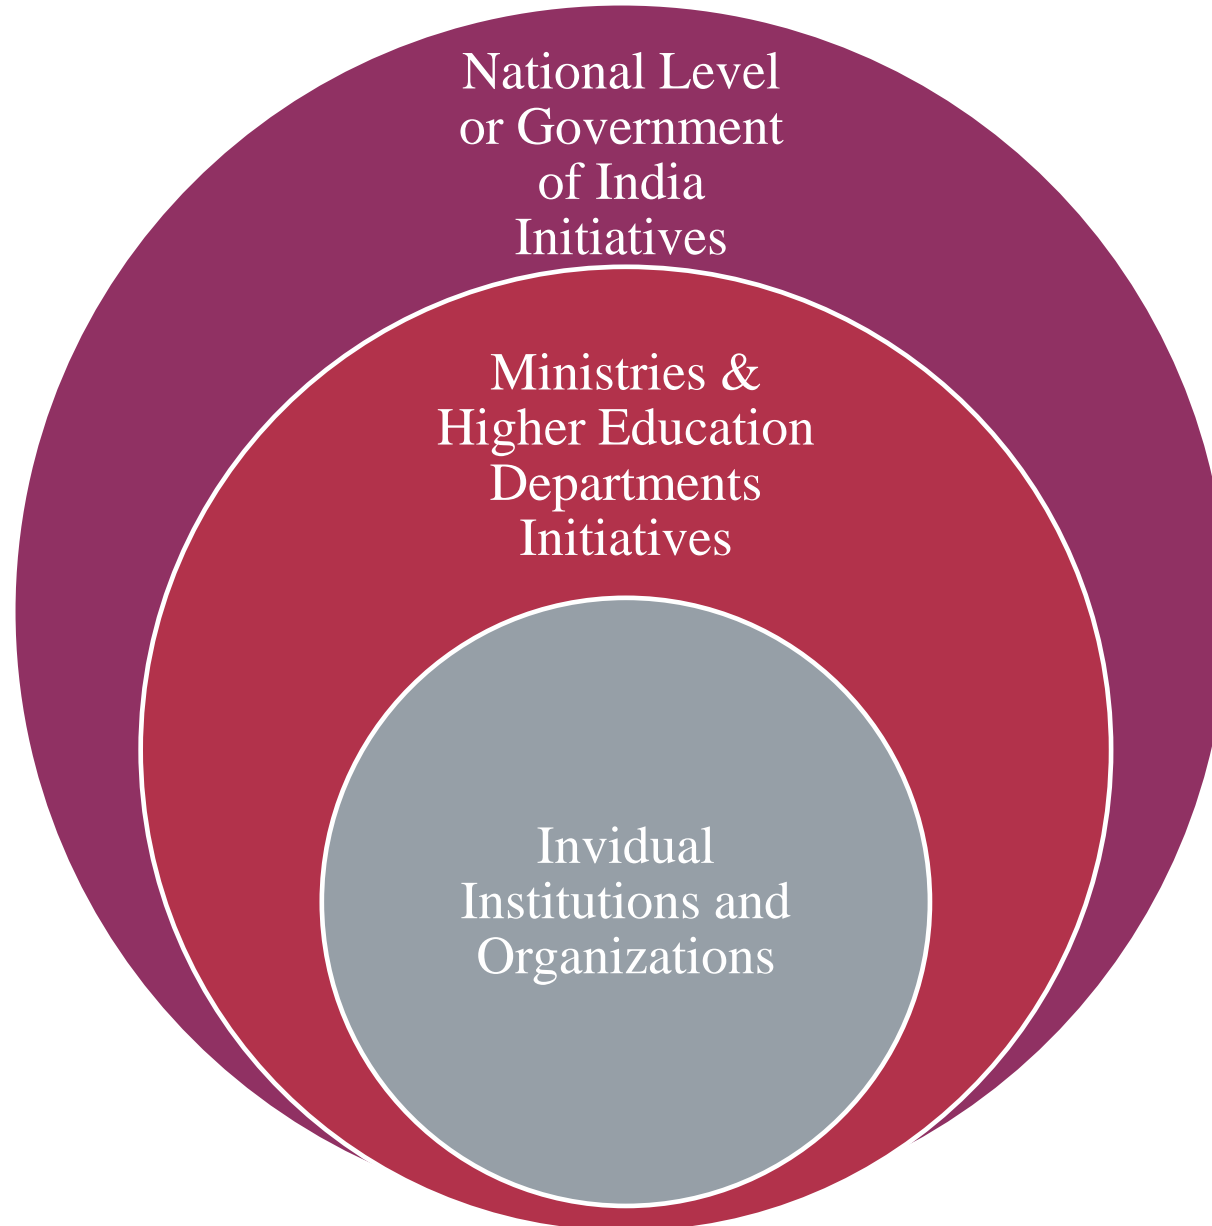

Findings 2: RDR stakeholders in India

Findings 3: Pillars of RDR interoperability in India...

- The RDM pillars need to work collaboratively and should have interoperability to establish sustained RDM services in India.
- Data creators and facilitators at the institutional level would have more responsibility
- Government funding agencies including the Ministry of Education and Higher Education Departments need to build ethical guidelines, policies and regulations.
- The National Research Data Services Centre by the Government of India is required to support the RDM initiatives by the institute and ministries and higher education departments.
- The National Research Data Services Centre will also be responsible for developing policies and imposing them to adopt and mandate to development of RDM services in the institutes in India.
- National research data services should develop the road map towards implementing national RDM services.
- Working with the RDM stakeholders to ensure research data is openly available to support innovation that benefits all research communities.

Findings 3: Pillars of RDR interoperability in India

Findings 4: Interoperable RDRs System in India...

■ Institutional level RDR

- Institutions have sole responsibility in building the OAI-PMH-compliant RDR in their respective institutions.
- Development of policy compliance, guidelines and data quality control
- Research data curation activities including the research dataset collection/receiving, cleaning, classification, metadata creation, assign license conditions,
- Build trusted data repositories to publish research data at the institutional level.
- Will provide the registered and restricted (limited) access within the campus.
- Only processed data, published data, and analyzed data available for access with other researchers.
- Confidential data and data which has the personal identifiable information will not be made available.

Findings 4: Interoperable RDRs System in India...

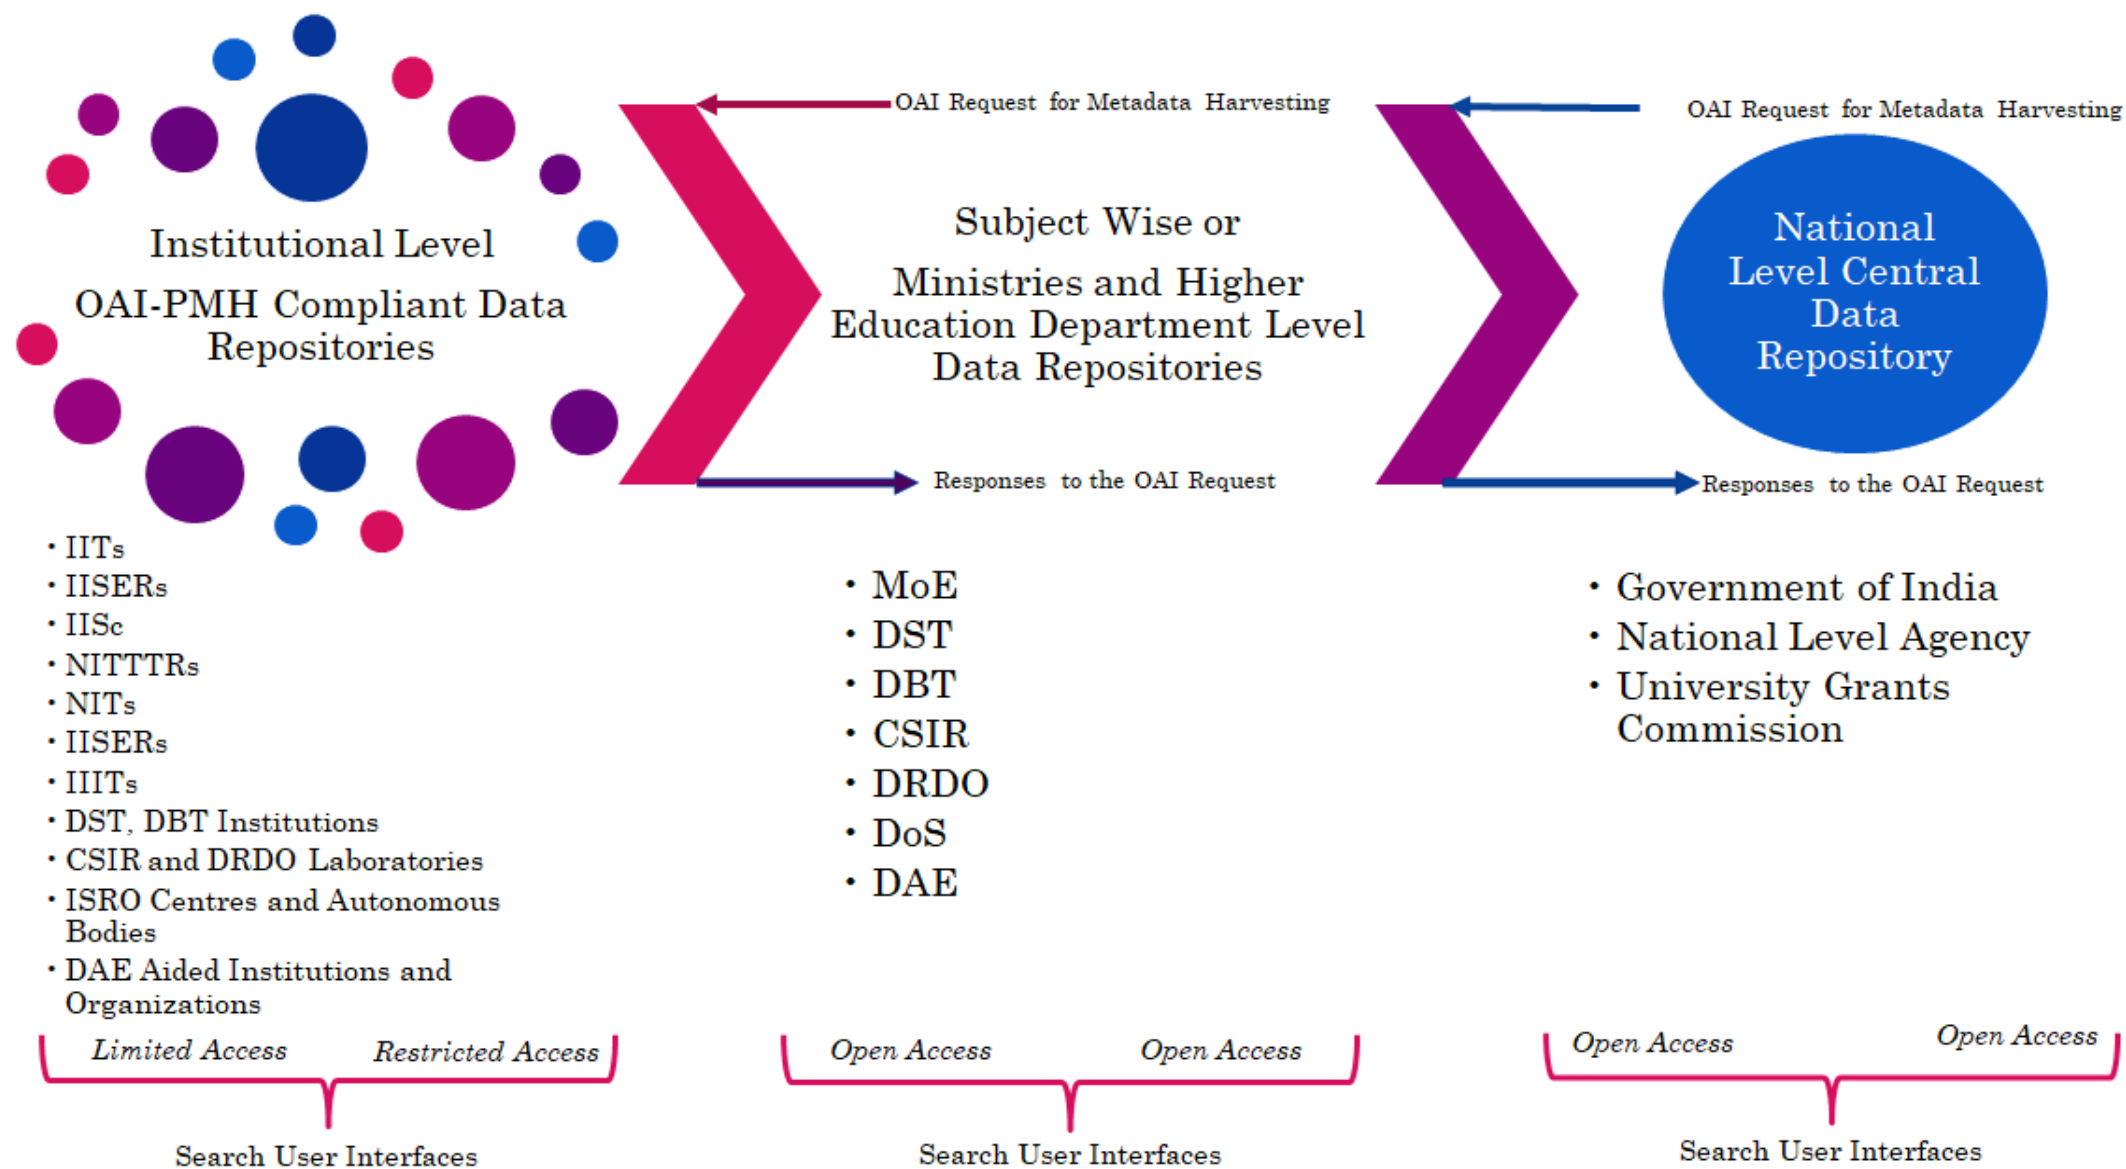

- **Disciplined or ministries and higher education department level RDR**
 - The second-level RDRs are hosted by a group of disciplined institutions or institutions funded by the Ministries of Education and Higher Education Departments, Government of India.
 - This level RDRs will host the research data generated by their all-respective institutions and researchers.
 - Research data will be harvested through the individual OAI-PMH-compliant institutional RDRs regularly.
 - These are value-added repositories along with institutional RDRs that enable the research communities to view these repositories to search and retrieve the research data by discipline wise.
 - However, users will have to follow the source URL of institutional RDR to download full datasets.

Findings 4: Interoperable RDRs System in India...

■ National-level central RDR

- Centralized RDR will need to harvest the metadata of research data from the individual institutions and as well as disciplines or ministries and higher education level RDRs.
- The nodal office, a national agency or network under the UGC, Government of India can host the central server for RDR.
- The top-level academic unit/networking bodies may take responsibility for developing centralized RDR
- It enables each institution and ministries / higher education departments will follow the strategic framework in developing the RDR and offering RDM services.
- The users can access the research data of various institutional RDRs through central search interface without any registration, restriction, and limitation.
- Users will follow the links to source of institutional RDR to access the full data set(s).

Findings 4: Interoperable RDRs System in India

Summary

- India is lacking in establishing national-level RDM services and repositories like National research data services of other countries.
- *Individual institutions and organizations; ministries & higher education departments; national level, and central level, government of India* are major pillars in developing the interoperable RDR system in India.
- Centralized national RDR increases the academic and research prestige of the country and helps in disseminating research data worldwide.
- Research data will be harvested through the individual OAI-PMH-compliant institutional RDRs regularly.
- The proposed workflow in this research study may give way to developing national-level RDM services and repositories to enable more discoverable research data and enhance data usage.
